Camera picks best focus point

Af Detection

ON

Auto subject detection

IS

ON Mode 1

Standard stabilization

Shutter Type

Auto (CSHTR)

Electronic 1st curtain — sharper

Photo Style

Standard

Neutral, balanced look

WB

AWB

Adapts to mixed lighting

Metering

Multi

Evaluative, whole frame

Flash

Forced Off

Available light only

DICAS

- Tap touchscreen to move Af point to your subject

- If S5 drops below 1/60 in the viewfinder, brace camera or open aperture

POR QUE ESTE MODO FUNCIONA

Aperture Priority: aperture is the creative decision (how much blur?) while shutter speed is just technical (fast enough to avoid shake). Control the one thing that matters, let the camera handle the rest. In good light the camera will never pick a bad shutter speed.

G9

C2

FRENTE

Portrait / People

People, environmental portraits, group photos. Face/eye detection does the hard work.

VERSO

Portrait / People

PARÂMETRO SALVO VALOR RACIONAL

Exposure mode	A (Aperture)	Aperture controls bokeh
ISO	AUTO	Adapts to light
Af Mode	Full Area	Finds faces across frame
Af Detection	ON — Human	Face/eye detection active
IS	ON Mode 1	Standard stabilization
Shutter Type	Auto (CSHTR)	Sharper, no vibration
Photo Style	Standard	Balanced skin tones
WB	AWB	Adapts to scene
Metering	Multi	Evaluative metering
Flash	Forced OFF	Natural light

DICAS

- Open shade gives the most flattering light on faces

- Check eyes are sharp after each shot — re-shoot if AF missed

POR QUE ESTE MODO FUNCIONA

Face/eye detection locks onto eyes with remarkable accuracy. Wide apertures (f/1.7-2.8) separate the person from the background — the classic portrait look. For groups, close down to f/5.6-8 so everyone is in the focal plane.

G9

C3-1

FRENTE

Landscape

Scenery, vistas, nature. Maximum sharpness across the entire frame.

!! SETUP FISICO -- VERIFICAR ANTES DE FOTOGRAFAR

[] Mode dial

C3

then rear dial to select C3-1

[] Focus lever

AFS

front of camera, top position

[] Drive dial

Single Shot

top-left dial, first position

AJUSTAR NO CAMPO

> Rear dial

= Aperture

controls depth of field across scene

> f/8-11 → SWEET SPOT for MFT — sharpest landscapes

> Never go past f/16 — diffraction softens the image

> Focus 1/3 into the scene, NOT on the horizon

> Golden hour (sunrise/sunset) = best landscape light

--- fold here --- cut along card borders --- front above, back below (inverted) ---

G9

C3-1

VERSO

Landscape

PARÁMETRO SALVO VALOR RACIONAL

Exposure mode	A (Aperture)	You control DoF across scene
ISO	AUTO	Stays at ISO 200 in good light
Af Mode	Full Area	Tap screen to pick focus point
Af Detection	OFF	No subject to detect in scenery
IS	ON Mode 1	Stabilized handheld
Shutter Type	Auto (CSHTR)	Sharper at slow speeds
Photo Style	Scenery	Enhanced greens, blues, contrast
WB	AWB	Or set Daylight for golden hour
Metering	Multi	Evaluative, whole frame
Flash	Forced OFF	Natural light only

DICAS

- If shutter drops below 1/60, use tripod or brace firmly

- Photo Style Scenery boosts colors — great for nature

POR QUE ESTE MODO FUNCIONA

Landscapes need front-to-back sharpness. On MFT sensors, f/8-11 gives deep DoF without diffraction softening (which starts past f/16). Focus 1/3 into the scene to maximize DoF coverage — not on the horizon.

Macro + Flash

Handheld close-ups: insects, frogs, snakes, lizards. Off-camera flash is the light source.

!! SETUP FISICO -- VERIFICAR ANTES DE FOTOGRAFAR

[] Mode dial	C3	then rear dial to select C3-2
[] Focus lever	MF	front of camera, bottom position
[] Drive dial	Single Shot	top-left dial, first position
[] Lens	90mm f/3.5 IS PRO	or swap: 60mm f/2.8 for small insects
[] Lens IS switch	ON	on the lens barrel
[] Flash: X3 trigger	Mount on hot shoe	turn ON, check channel
[] Flash: AD100Pro	Turn ON	match channel/group with X3
[] Flash: ML-CD15	Attach to AD100Pro	diffuser — softer light

AJUSTAR NO CAMPO

!! DO NOT TOUCH camera dials — all exposure settings are FIXED

- > Flash power **Adjust on X3 only** start Manual 1/128
- > Too bright → lower X3 power. Too dark → raise X3 power
- > TTL works 0.5x-1x on Mkl. Above 1x: switch X3 to M 1/128
- > Focus: rock your body in/out. Focus ring for coarse adjust

--- fold here --- cut along card borders --- front above, back below (inverted) ---

POR QUE ESTE MODO FUNCIONA

In flash macro, the flash is the light system. Ambient is irrelevant — the flash fires at ~1/10000s, freezing motion and providing all illumination. Everything is fixed: f/16 for deep DoF, 1/200 for sync, ISO 200 for clean files. Open to f/11 when you can nail focus. The only variable is flash power, adjusted on the X3 trigger.

DICAS

- 90mm = safer working distance (frogs, snakes). 60mm = more magnification (insects)
- Flash fires at ~1/10000s — freezes all motion regardless of shutter speed

Exposure mode	M (Manual)	Flash is the light; ambient irrelevant
Aperture	f/16	Deep DoF for tiny subjects. Open to f/11 if focus is easy
Shutter Speed	1/200s	Max flash sync speed
ISO	200 (fixed)	Low noise; flash provides light
Focus	MF	Af hunts at macro — rock to focus
Shutter Type	Mechanical	Required for flash sync
Flash	ON / TTL	Flash fires every shot
Flash Adjust	0 EV	Fine-tune per session
IS	ON Mode 1	Helps frame while rocking
Photo Style	Natural	Accurate nature colors

Wildlife / Action

Birds, animals in motion. Continuous tracking, high-speed burst.

!! SETUP FISICO -- VERIFICAR ANTES DE FOTOGRAFAR

[] Mode dial

[] Focus lever

[] Drive dial

[] Lens

C3

AFC

Burst I (H)

Lumix 35-100mm f/2.8

then rear dial to select C3-3

front of camera, middle position

top-left dial, burst position

AJUSTAR NO CAMPO

> Front dial

= Aperture

open wider in shade for lower ISO

> Rear dial

= Shutter speed

raise for faster subjects

> f/2.8 in shade (max light) → f/4-5.6 in bright sun

> 1/1000 baseline. Raise to 1/2000-1/4000 if enough light

> Half-press and HOLD to track — AF locks on animal automatically

> Zoom out slightly — crop later. In frame > missed entirely

> Accept high ISO. Noisy sharp > clean blurry

--- fold here --- cut along card borders --- front above, back below (inverted) ---

G9

C3-3

VERSO

Wildlife / Action

PARÂMETRO SALVO VALOR RACIONAL

Exposure mode	M (Manual)	Lock aperture + speed; ISO floats
Aperture	f/2.8	Wide open for max light
Shutter Speed	1/1000s	Freezes animal motion
ISO	AUTO	Camera adjusts exposure freely
Min SS	1/1000s	Floor — won't go slower
AF Detection	ON — Animal	Detects animals/birds
AF Mode	Zone	Large tracking area
Shutter Type	Electronic	Max burst speed, silent
IS	ON Mode 1	Standard stabilization
Photo Style	Standard	Balanced processing

DICAS

- M + Auto ISO = 'wildlife triangle': lock aperture + speed, ISO floats

- Zone AF gives generous tracking area — no need for surgical framing

POR QUE ESTE MODO FUNCIONA

Manual + Auto ISO guarantees your two critical variables: f/2.8 for max light gathering, 1/1000s baseline for freezing motion. Raise to 1/2000+ if light allows. The camera just adjusts ISO. AFC + Animal Detection + Zone AF; camera recognizes animals, locks on, and tracks through the frame.
